Kothrud, Pune, MH-411038

Software Developer Engineer with 3.1 years of experience building scalable web applications in the Banking and E-commerce domains. Skilled in delivering clean UI, integrating APIs, and working across the full stack using React, Node.js, and MongoDB.

EDUCATION

B.Tech - KIT College , Kolhapur
2022 | 8.86 CGPA

12th – SRVM College, Jath
2018 | 80%

10th – Jath Highschool, Jath
2016 | 87%

EXPERIENCE

Software Developer Engineer
Orangebits Software Technologies Pvt.
Ltd, Pune
Jan 2023 – Present

CERTIFICATES

- Full Stack Development Intern
- Frontend Developer (React)
- Responsive Website Design
- JavaScript Algorithms and Data Structures

PROFESSIONAL EXPERIENCE

- Results-driven **Full Stack Web Developer** with 3.1 years of experience in designing, developing, and deploying scalable web applications. Proficient in both **front-end** and **back-end** technologies, ensuring seamless user experiences.
- Participated in all phases of the Software Development Life Cycle (**SDLC**), including requirements gathering, analysis, design, development, testing, and deployment.
- Collaborated with **UX/UI** designers to enhance website aesthetics and functionality.
- Collaborated with project managers and designers to create reusable UI components using **JavaScript**, **HTML5**, **CSS3**, and **Bootstrap**.
- Designed and developed **RESTful** web services for efficient data handling and integration.
- Utilized **Postman** for **API** testing, ensuring robust and reliable service performance.
- Conducted code reviews and utilized static code analysis tools to enhance code quality and security.
- Designed and implemented a secure user management system with custom forms and responsive design.
- Worked on full-stack features using React (frontend) and basic backend using Node.js & Express.js.
- Proficient in **HTML5**, **CSS3**, and **JavaScript**, ensuring responsive and user-friendly interfaces.
- Experienced with **UI/UX** frameworks such as **Bootstrap** and **Semantic UI** for modern designs.
- Managed web server setup and optimization for improved performance.
- Created **Restful** APIs with **JWT** authentication for secure third-party integrations.
- Resolved cross-browser compatibility issues across major browsers, ensuring a seamless user experience.

RELEVANT SKILLS

- HTML5
- CSS3
- Tailwind CSS
- Bootstrap
- JavaScript
- React
- Redux Toolkit
- Node
- Express
- MongoDB

PROJECTS

Title : Face Recognition Payment Integration

Client : Leading Online Retailer

Domain : E-Commerce / Fintech

Environment : React.js, React Native, Node.js, SQL, JavaScript, HTML5, CSS3, Git

Testing : Functional Testing, API Testing, Integration Testing, Manual Testing

Description :

This project was about adding a face recognition-based payment system to an online shopping platform. The idea was to let users pay just by showing their face to their phone camera — making the process faster, more secure, and touchless. Users could register their face using a mobile app, which connects their face to their payment method. At the time of checkout, they just look at their phone and the system verifies their face instantly and completes the payment — no need to type passwords or card details.

My Responsibilities:

- Developed responsive UI for the payment system using React.js
- Built components for user registration, checkout screen, and face scan interface
- Used API calls to send and receive data like face info and payment status
- Handled form validations, user input, and error messages

Title : B2B Procurement SaaS Platform

Client : Leading B2B Company

Domain : Supply Chain / SaaS

Environment : React.js, JavaScript, HTML5, CSS3, Git, Basic Node.js

Testing : Functional Testing, Component Testing, Manual Testing

Description :

This project focused on building a SaaS-based B2B platform to make the procurement process faster, easier, and more collaborative. The client was struggling with a complex and slow process for buying products from suppliers. The existing system was not user-friendly and made it hard to find products and communicate with suppliers. Our solution was to develop a modern platform that helps buyers and suppliers connect better, manage orders more easily, and complete secure payments — all in one place.

My Responsibilities:

- Developed a clean and responsive UI using React.js to simplify product discovery
- Created components for product listings, filters, sorting, and supplier communication
- Implemented search and advanced filter options for easier product selection
- Worked on frontend integration with order management APIs
- Added user-friendly forms for negotiation and messaging between buyers and suppliers
